"Simple Natural & Effective"

Options & Prices		
Standard Garden	Single Release of 3000 Persimilis	\$65.00
Large Garden	Single Release of 5000 Persimilis	\$85.00

Two-Spotted Mite Control is simple, cheap and effective with Bug Central.

Predatory mites (*Phytoseiulus persimilis*) have been commercially reared and used in Integrated Pest Management programs for more than 15 years. Persimilis are small, fast moving predatory mites that feed voraciously on two spotted mites. Two spotted mites are sometimes referred to as red spider mites as they over winter as a lighter red/orange colour.

Persimilis prefer warm, slightly humid conditions, and are therefore very good in green houses or similar enclosed environments. They are also very effective in small crops, such as vegetable gardens or small ornamental plants. For tree crops in hot environments, another predatory mite may be more suitable. Please email us if you require clarification of the best option.

Persimilis normally only require a single release, with numbers slowly building over 4 to 6 weeks. However, if higher numbers of mites are present, then a second release of Persimilis may be needed. Similarly, a second release is sometimes needed later in the season if mites are persistent

The Product consists of either 3000 or 5000 Persimilis, which are despatched in plastic bottles containing vermiculite as a carrier for the mites. Included with your order is information on releasing the predators, and ideas on controlling mites in a range of situations. 3000 mites is enough for a medium to large vegetable garden or household greenhouse, with the larger order suited to large gardens or in situations with high mite pressure.

Releasing the Persimilis is as simple as spreading the contents of each bottle evenly around the target area. Detailed information on the release method is included in the information booklet that will be emailed to you after placing your order.

To Order, simply choose the product option on our secure on-line order system. You will receive confirmation of your order within 3 working days. The product is delivered by Australia Post's Express Post service, so delivery time is normally only 1 to 2 days from orders being processed.
