

Lace Bug Control on Azaleas & Rhododendrons

"Simple Natural & Effective"

Options & Prices		
Standard Garden	Double Release of 4 Punnets Lacewings	\$78.00
Large Garden	Double Release of 8 Punnets Lacewings	\$120.00

Azalea Lace Bug Control is simple, cheap and effective with Bug Central. Lacewings are a native predator found throughout southern Australia, which eat a wide range of insects. Experience over the last 5 years has shown that lacewings offer a reliable control option for lace bugs for Azaleas and Rhododendrons.

Several releases of lacewings are normally required to keep lace bugs under control. First release should be made once young lace bugs are evident on the underside of leaves, normally around early summer but this varies between seasons and locations.

Each order includes 2 lots of lacewings, sent 2 weeks apart. Follow up releases are usually required after Christmas, in particular if lace bug numbers remain high. If higher numbers of lace bugs are already present, particularly adults, then a soft spray option may be required before releasing lacewings. If you are not sure of the best options, please email us prior to ordering.

The Product consists of either 4 or 8 punnets of around 100 Lacewings, delivered twice two weeks apart. Included with your order is information on releasing the lacewings, and ideas on controlling lace bugs in a range of situations. This will be emailed to you prior to receiving the lacewings, and provides in depth information on how to achieve the best result with the lacewings, and how this fits with the bigger picture of lace bug control.

Releasing the Lacewings is as simple as spreading the contents of each punnet of lacewings evenly around the target area. This takes only a few minutes! Detailed information on the release method is included in the information that will be emailed to you after placing your order.

To Order, visit our website and simply choose the product option on our secure on-line order system. You will receive confirmation of your order within 3 working days, including an expected delivery date. The lace bug control product is delivered by Australia Post's Express Post service, so delivery time is normally only 1 to 2 days from orders being processed.
